

# POLISPEC NIR

ON THE FIELD AND IN THE FEED TROUGH: measurement of food variables directly on the farm

Control of raw materials

Monitoring of the ration

Analysis of digestibility and feed efficiency

Precision

Versatility

Speed

MEASUREMENT

Polispec NIR can be used directly on feed ingredients, verifying its quality in several points and obtaining safe, immediate and contextual data in the company

CHECK

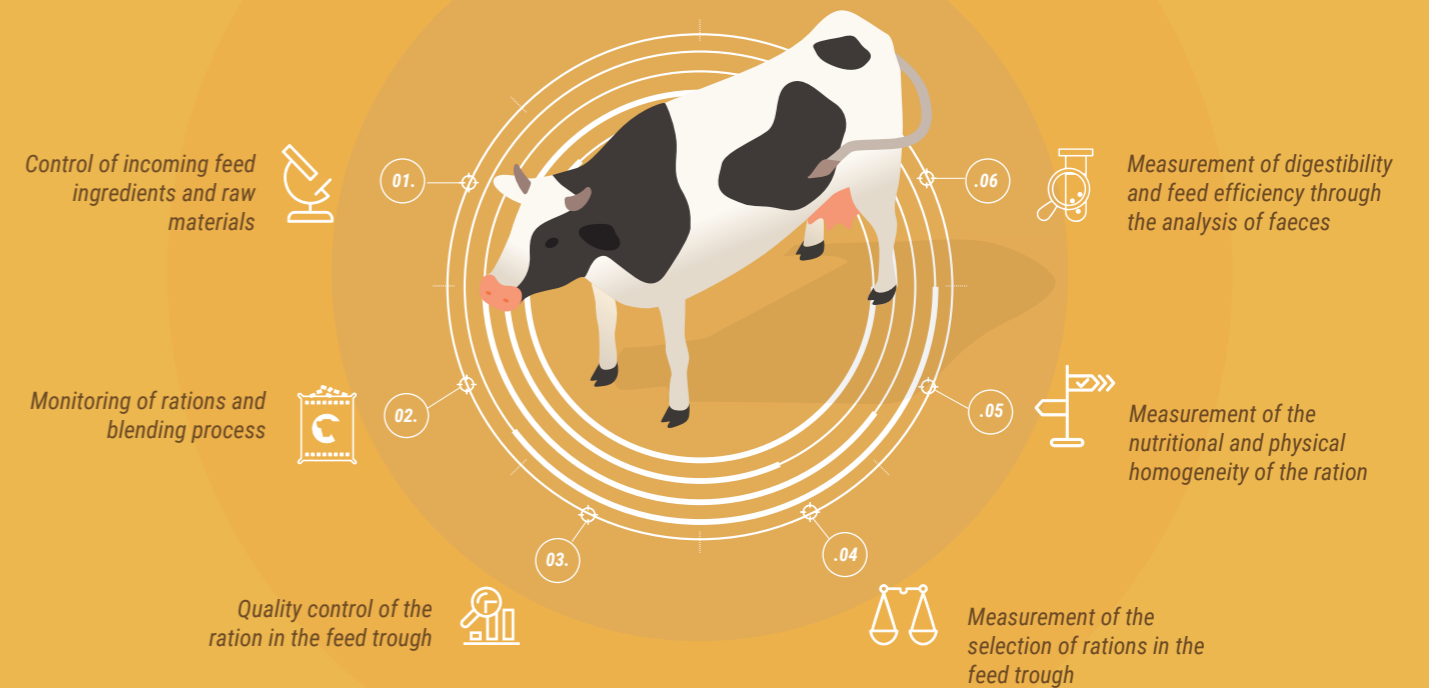

Polispec NIR is used to control the quality of execution of the rations by measuring homogeneity in the feed trough. With Polispec NIR it is also possible to measure and understand if and where animals select feeds with the risk of compromising the effectiveness of the ration

PROFESSIONALISM

With Polispec NIR it is possible to quickly and easily perform the analysis of manure directly in the barn, analysing the percentage of nutrients lost through the faeces and accurately evaluating the feed efficiency of the company

# REARING

Analysis of the entire feeding process FROM THE MONITORING OF THE RAW MATERIALS TO THE ANALYSIS OF THE FEED TROUGH AND WASTE

REDUCTION OF FEED WASTE

By optimising the quality and management of feed ingredients and improving the feeding process, important results can be obtained on the company's feed efficiency

QUALITY IMPROVEMENT

The measurement and control of nutritional variables in the company is used to effectively improve the processes and feed management in the company, conferring further and recognised professionalism to the consultant activity

HIGHER YIELDS AND GREATER EARNINGS

Monitoring and intervention skills are key elements for customer success. A qualitative and professional management of the feeding process allows the customer to achieve better production performance and to reduce the risk of costly errors
